## **DETAILED ACTION**

### ***Request for Continued Examination***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/10/09 has been entered.

### ***Claim Rejections - 35 USC § 103***

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1-16, 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Idaszak (US #4,021,927, hereafter '927) in view of Vezzani (EP 0710670 A1, hereafter '670).
4. The ground of rejection is maintained for the reasons set-forth in the prior office action.

***Response to Arguments***

5. Applicant's arguments filed 12/10/2009 have been fully considered but they are not persuasive.
6. Applicant's arguments fail to comply with 37 CFR 1.111(b) because they amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.
7. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).
8. Applicant argues that there is no motivation to combine the references applied in the rejection. This argument is not persuasive. The rejection states that it would have been obvious to one having ordinary skill in the art at the time of the invention to modify the reactor of '927 to contain a rotor with blades that convey the starch from the inlet of the reactor to the outlet as disclosed in '670 because the agitation applied by a rotor within the reactor favors the completion of the modification reaction (column 2, lines 39-43). Thus, motivation is provided in the rejection.
